

SITUATION

Sprint and SKC Communications' partnership continues to thrive with the completion of this project. Sprint engaged SKC on a project to assist with the design and build of a conference center they were renovating at their headquarters.

SOLUTION

The building consists mainly of flexible multipurpose rooms. Each room has the capability to do video conferencing, audio conferencing, and local presentation. The space also features digital signage in the form of portrait displays and digital door cards.

RESULTS

All rooms are powered by Crestron control and video switching. Audio processing and microphones are powered by Biamp technology. The display technology in the rooms varies from PrimeView LED video walls to large Samsung LCD displays. All video conferencing and camera tracking is Poly technology.

TECHNOLOGIES USED

Crestron
Biamp
Samsung
PrimeView
Poly
